Volunteer Thank You

Thank you for taking the time to volunteer for a FIRST® Tech Challenge event. FIRST® and FIRST® Tech Challenge rely heavily on Volunteers to ensure events run smoothly and are a fun experience for Teams and their families, which could not happen without people like you. With over 4,600 Teams competing annually, your dedication and commitment are paramount to the success of each event and the FIRST Tech Challenge program. Thank you for your time and effort in supporting the mission of FIRST!

Sponsor Thank You

Thank you to our generous sponsors for your continued support of the FIRST Tech Challenge!

Introduction

What is FIRST® Tech Challenge?
FIRST Tech Challenge is a student-centered activity that focuses on giving students a unique and stimulating experience. Each year, Teams participate in a new Game that requires them to design, build, test, and program autonomous and driver-operated robots that must perform a series of tasks.

The playing field for the Game consists of the FIRST Tech Challenge game pieces set up on a foam-mat surface, surrounded by a metal and polycarbonate Field frame. Each Tournament features Alliances, which are comprised of two Teams, competing against one another on the playing field. Teams work to overcome obstacles and meet challenges, while learning from, and interacting with their peers and adult Mentors. Students develop a greater appreciation of science and technology and how they might use that knowledge to impact the world around them in a positive manner. They also cultivate life skills such as:

- Planning, brainstorming, and creative problem-solving.
- Research and technical skills.
- Collaboration and teamwork.
- Appreciation of differences and respect for the ideas and contributions of others.

To learn more about FIRST Tech Challenge and other FIRST Programs, visit www.firstinspires.org.

FIRST Tech Challenge Core Values
Volunteers are integral to the FIRST community. FIRST Tech Challenge relies on Volunteers to run the program at many levels, from managing a region to Mentoring an individual Team. Our Affiliate Partners coordinate the program in each region or state. These Affiliate Partners fundraise, run Tournaments, hold workshops and demonstrations, market FIRST Tech Challenge locally, handle public relations, and recruit Volunteers and Teams. They are a tremendous resource for Mentors and FIRST would not exist without them.

FIRST asks everyone who participates in FIRST Tech Challenge to uphold the following values:

- We display Gracious Professionalism® with everyone we engage with and in everything we do.
- We act with integrity.
- We have fun.
- We are a welcoming community of students, Mentors, and Volunteers.
- What we learn is more important than what we win.
- We respect each other and celebrate our diversity.
- Students and adults work together to find solutions to challenges.
- We honor the spirit of friendly competition.
- We behave with courtesy and compassion for others at all times.
- We act as ambassadors for FIRST and FIRST Tech Challenge.
- We inspire others to adopt these values.

Gracious Professionalism® - “Doing your best work while treating others with respect and kindness - It’s what makes FIRST, first.”
Gracious Professionalism®

FIRST uses this term to describe our programs’ intent. This is one of the most important concepts that can be taught to a young person who is learning to get along in the work world. At FIRST, Team members help other team members, but they also help other Teams.

Gracious Professionalism® is not clearly defined for a reason. It can and should mean different things to everyone.

Some possible meanings of Gracious Professionalism® include:

- Gracious attitudes and behaviors are win-win.
- Gracious folks respect others and let that respect show in their actions.
- Professionals possess special knowledge and are trusted by society to use that knowledge responsibly.
- Gracious Professionals make a valued contribution in a manner pleasing to others and to themselves.

In the context of FIRST, this means that all Teams and participants should:

- Learn to be strong competitors, but also treat one another with respect and kindness in the process.
- Avoid leaving anyone feeling as if they are excluded or unappreciated.
- Knowledge, pride and empathy should be comfortably and genuinely blended.

In the end, Gracious Professionalism® is part of pursuing a meaningful life. When professionals use knowledge in a gracious manner and individuals act with integrity and sensitivity, everyone wins, and society benefits.

Watch Dr. Woodie Flowers explain Gracious Professionalism® in this short video.

“The FIRST spirit encourages doing high-quality, well-informed work in a manner that leaves everyone feeling valued. Gracious Professionalism seems to be a good descriptor for part of the ethos of FIRST. It is part of what makes FIRST different and wonderful.”

- Dr. Woodie Flowers, National Advisor for FIRST

Gracious Professionalism® for Volunteers
It is a good idea to spend time going over this concept with Volunteers. Provide Volunteers with real-life examples of Gracious Professionalism in practice before, during, and after the event and recognize great Gracious Professionalism when you see it in action!
Youth Protection Program

The purpose of the FIRST® Youth Protection Program (FIRST YPP) is to provide Coaches, Mentors, Volunteers, employees, others working in FIRST programs, team members, parents, and guardians of team members with information, guidelines, and procedures to create safe environments for everyone participating in FIRST programs.

The FIRST YPP sets minimum standards recommended for all FIRST activities. Adults working in FIRST programs must be knowledgeable of the standards set by the FIRST YPP, as well as those set by the school or organization hosting their team.

Youth Protection Expectations and Guidelines

Coaches and Mentors are expected to read and follow elements in the FIRST Youth Protection Program guide that are labeled as required are mandatory in the United States and Canada, and may not be waived without the approval of the FIRST Youth Protection Department.

FIRST recommends that the standards set forth in the FIRST Youth Protection Program guide be applied outside of the United States and Canada to the extent possible. At a minimum, local regulations regarding youth protection must be complied with.

Forms are available here: http://www.firstinspires.org/sites/default/files/uploads/about/FORMS.zip

Information on the Canadian Screening process is available here: http://vimeo.com/30137373

You can find FAQ and additional information about the FIRST Youth Protection Program on the FIRST website at: http://www.firstinspires.org/resource-library/youth-protection-policy

Everyone working with FIRST Teams should be familiar with the FIRST YPP policies.

NOTICE OF NON-DISCRIMINATION

United States Foundation for Inspiration and Recognition of Science and Technology (FIRST®) does not discriminate on the basis of race, color, national origin, sex, disability, or age in its programs and activities. The following person has been designated to handle inquiries regarding the non-discrimination policies: Lee Doucette, Youth Protection Program Manager, 200 Bedford Street, Manchester, NH 03101, 603-666-3906, Ext. 250.

Gracious Professionalism® - “Doing your best work while treating others with respect and kindness - It’s what makes FIRST, first.”
What is the FIRST® Tech Challenge Velocity Vortex℠ DIY Guide?

This guide includes instructions on how to build a HALF field for the 2016 – 2017 Velocity Vortex℠ game.

DIY Shopping Guide

Full Shopping Guide for a HALF field.

*Cost per unit will vary  
**Can purchase one 4x4 panel and cut in half  
***Same 3/4in pipe, cut to size

Recommended Tools

Listed below are all tool used in this Guide. Each Section will list the tools used in creating that element. Please note that some tools are used multiple times.

- 1/4” drill bit
- 1/8” drill bit
- 3/16” drill bit
- 5/16” drill bit
- 3/32” drill bit
- 1/2” spade bit
- 1” spade bit
- 2” hole saw
- 3” hole saw
- Band saw or sheet metal shears
- Clamps
- Circular saw
- Drill motor
- Framing square
- Jigsaw
- Mallet
- Philips head screw driver or Philips bit for the drill
- Rivet gun
- Rivets
- Sandpaper
- Tape measurer
- Wood glue

Center Vortex Wheel (DIY17-4-1)

Materials and Tools
- (1) ¾” plywood (2ft x 2ft panel)
- (14) PVC end caps (flat bottom)
- 1/4” drill bit
- 3/16” drill bit
- 1/2” spade bit
- 3” hole saw
- Drill motor
- Jigsaw
- Sandpaper
- Tape measure

NOTE: The shopping list and build instructions only creates one Center Vortex Wheel. If you want two, double up the materials where appropriate.
**Center Vortex Wheel Cut Diagram**

**Center Vortex Wheel Cut Instructions**

1. Cut out 2ft x 2ft piece from the ¾" plywood
2. Layout hole center points and cut lines

*Gracious Professionalism® - “Doing your best work while treating others with respect and kindness - It’s what makes FIRST, first.”*

4. Use 3” hole saw to cut out large outer holes

5. Use ½” spade bit for interior ring of holes
6. Use 3/16” drill for bolt holes along perimeter

7. Use jigsaw to cut out openings

8. Use jigsaw to cut out perimeter
9. Drill the center holes with a 1” spade bit (You may have to enlarge the hole slightly with sandpaper to fit the ¾” PVC pipe)

10. Finish sand the wheel to smooth out any rough edges and remove splinters
11. Drill a 3/16” diameter hole (using the 3/16” drill bit) in the center of each PVC end cap (14)

NOTE: End Caps from Lowes and Home Depot have rounded ends. They work, but will increase the height of the pipes on the DIY Center Vortex Wheel.
Wood Base Plate (DIY17-2-1)

Materials and Tools

- ¾” plywood (2ft x 2ft panel)
- ¾” Steel Pipe Base Flange
- 5/16” drill bit
- Circular Saw
- Drill Motor
- Sand Paper
- Tape Measurer

Wood Base Plate Cut Diagram

1. Cut out 23 7/8” by 23 7/8” piece from the ¾” Plywood
2. Drill the four holes using the flange as a guide (5/16” drill bit)
3. Using the Sandpaper to sand the edges

Figure 3: Wood Base Plate Cut Diagram

Gracious Professionalism® - “Doing your best work while treating others with respect and kindness - It’s what makes FIRST, first.”
PVC Cuts for Center Vortex (DIY17-3-4, DIY17-3-5, DIY17-3-6, DIY17-4-3, DIY17-4-4)

Materials and Tools

- 1 ¼" PVC
- ¾" PVC
- Circular Saw
- Tape Measurer

PVC Cut Instructions

1. DIY17-3-4: Cut one 30" long pip from 1 ¼" PVC
2. DIY17-3-5: Cut two 13 ¼" long pipes from 1 ¼" PVC
3. DIY17-3-6: Cut two 6" long pipes from ¾" PVC
4. DIY17-4-3: Cut seven 9.5" long pipes from ¾" PVC
5. DIY17-4-4: Cut seven 13" long pipes from ¾" PVC
Flat Sheet Cone (DIY17-4-7)

Materials and Tools
- 1/16” polycarbonate
- ¼” drill bit
- 2” hole saw
- Drill motor
- Band saw or sheet metal shears

Flat Sheet Cone Cut Diagram

Figure 4: Flat Sheet Cone Cut Diagram

Flat Sheet Cut Instructions
1. Layout holes and cuts
2. Drill small holes using the 1/4” drill bit
3. Drill the larger center hole using a 2” hole saw
4. Cutout the perimeter of the 24” diameter disk
5. Cutout the pie wedge using the band saw or sheet metal shears
**Overview: Corner Vortex (DIY17-1)**
The parts listed are the parts used in the following Wood cut and PVC cut sections. The total lists for assembly will be listed out in the Build Instructions.

Recommended Tool List

- Clamps
- Framing square
- Jigsaw
- Mallet
- Phillips head screw driver or Philips bit for the drill
- Rivet gun
- Rivets
- Sandpaper
- Tape measure
- Wood glue

Build Instructions

DIY17-2: Stationary Base

1. Base Flange Mounting
   - Insert the ¼-20 spike (tee) nuts (DIY17-2-5) into the holes from the bottom surface, but do not tap these in yet.
   - Insert the four ¼-20 x 1” flat head bolts (DIY17-2-4) from the top and use the screw to pull the T nuts in. (This makes it easier to align all four of them to the base Flange (DIY17-2-2))

2. Pipe Assembly
   - Screw in the 24” pipe (DIY17-2-3) into the flange, hand tight.
**DIY17-3: Center Stand**

1. Insert the 30" 1 ¼" PVC pipe (DIY17-3-4) into the center leg of the Tee fitting (DIY17-3-1).
2. Insert the 13 ¼" 1 ¼" PVC pipes (DIY17-3-5) into the Tee fitting.
3. Use a soft mallet to insure the pips are seated firmly.

4. Insert one reducer fitting (DIY17-3-3) into each elbow (DIY17-3-2).
5. Insert a 6" ¾" PVC pipe (DIY17-3-6) into each reducer fitting.
6. Slip the other end of the elbow onto the 13 ¼" pipes and tap with a mallet to insure they are fully seated onto the pipe.

**NOTE:** During use, the reducer fitting will be exposed to a lot of twisting forces, so it is important that the 13 ¼" pipes and elbows be locked in place. The PVC can be glued, but because the glue sets up so quickly it is difficult to insure that the two 6" pipes are aligned properly. A simpler way to accomplish this is to rivet the pipes to the fittings.
7. Lay the assembly on a smooth, flat surface.
8. Adjust the 6" pipes until the gap between the floor and the pipe is ½”. (You can use scrap pieces of the ½" plywood for this purpose)

9. Drill 1/8” diameter holes into the Tee fitting and the elbow. Rivet the fitting to the 13 ¼” pipes.

10. Slide the 30” 1 ¼” PVC pipe over the 24” pipe of the Stationary Base (DIY17-2).
**DIY17-4: Center Goal**

1. Attach the (14) PVC endcaps (DIY17-4-2) to the Center Vortex Wheel (DIY17-4-1) with 10-32 x 1 ¼” long bolts (DIY17-4-5) and 10-32 Nylock nuts (DIY17-4-6).

![Top View](image1.png) ![Bottom View](image2.png)

2. Insert the (14) ¾” PVC pipes (DIY17-4-3, DIY17-4-4) into the End Caps, alternating heights.

![Image](image3.png)

3. Place the Center Vortex Wheel atop one of the 6” ¾” PVC pipe (DIY17-3-6).

![Image](image4.png)

4. Install the polycarbonate cone around the crossbar. Match drill holes and secure with a ziptie.

Recommended Tool List

- Clamps
- Framing square
- Jigsaw
- Mallet
- Phillips head screw driver or Philips bit for the drill
- Rivet gun
- Rivets
- Sandpaper
- Tape Measurer
- Wood glue

Build Instructions

Side Panel Assembly

1. Apply wood glue to Side Panel B (DIY17-1-2) and clamp it to Side Panel A (DIY17-1-1).
   - The long vertical side of Panel B should line up with the vertical edge of the Panel A. The bottoms of the two panels should be aligned.
   - Make two of these assemblies, but they must be **MIRROR** images of each other.
2. Attach two Ramp Standoffs (DIY17-1-7) to each Side Panel Assembly with wood glue and 1 ½” Wood Screws.
   - The Standoffs should be attached to Panel A on the side opposite where Panel B is attached.

   ![Panel A View](image)

**Ramp Surface Assembly**

1. Line up the Center Spine (DIY17-1-4) to the center of the Ramp Surface (DIY17-1-3).
   - It may help to draw a set of alignment lines to insure the Spine is properly centered on the Ramp.
   - Then you can transfer the pilot holes from the Ramp Surface to the Ramp Spine.

   ![Alignment marks](image)

2. Apply wood glue to the angle edge of the Ramp Spine and use (4) 1” Wood Screws to attach the Ramp to the Ramp Spine.

   ![Top View and Bottom View](image)
Ramp Assembly

1. Attach the Side Panel Assemblies to the Ramp Surface Assembly using the Panel B side of the Side Panel Assembly to support the Ramp Surface.

2. Align the top edge of the Ramp Surface with the vertical edge of Side Panel A.
   - The Side Panels and the Center Spine should meet together as shown in the photo (below).
   - It helps to tie all three parts together with two zip ties (keep them loose) to hold the parts in the proper location while you are trying to insert the wood screws.

3. When parts are in proper alignment, use 1” Wood Screws to attach both Side Panel Assemblies to the Ramp Surface.
Goal Assembly
1. Align the Top Goal Definer (DIY17-1-5) to the top of both Side Panel A assemblies.
2. Use 1" Wood Screws to attach the Top Goal Definer to the Side Panels.

Return Ramp Assembly
1. Place the two Return Ramps (DIY17-1-6) on the Standoffs on either side of the Ramp Assembly.
2. Use two zip ties to attach the Return ramps together.
3. Use four zip ties to attach the Return Ramps to the Standoffs.

Final Assembly
